

Potential biological benefits of blood ozone cleansing therapy

- Alleviate full-body fatigue, muscle fatigue.
 - Promotes repair of damaged muscles
 - Reduces lactic acid build-up to prevent muscle deterioration
- Promotes cell rejuvenation.
 - Normalizes cell breathing
 - Reduces reactive oxygen to prevent cell deterioration
 - Accelerates metabolism, including organ and endocrine functions
- Improves physical state to prevent sickness.
 - Promotes interferon production to stimulate immunity functions
 - Stimulates immune system functions and detox functions
- Improves hand and foot blood flow.

Provides various biological functions.

Treatment method

1. Blood sample collection...Collect a 100-150ml blood sample.

Collected blood is normally a dull black color.

2. Ozonation...Adds specific amount of medical ozone to the blood.

Positive results cannot be expected if the volume of ozone is too much or too little. To stimulate the metabolism and immune system after dosage, accurately measure the most effective ozone volume and run through a filter, and then inject into a bottle. Once the blood and ozone react, the dull black colored blood will immediately change to a brilliant red color.

3. Intravenous drip...Return the blood now activated with the ozone.

This alone can be enough to bring relief to people who suffer from chills. While effect is different for each person, some people begin to feel their body warming up during the actual treatment. This treatment can help oxygen flood throughout the body, from the fingers to the tips of your toes, and even improve oxygen flow to the brain and eyes, resulting in some users experiencing clearer vision during treatment.

*Some benefits can be expected from a single treatment but people seeking health maintenance, anti-aging, fatigue recovery, etc. can expect benefits by continuing with treatment once every two to four weeks. People recovering from cancer procedures or with virus infections seeking to improve their immune system functions should receive treatment once or twice per week.

Blood Cleansing Treatment

BLOOD CLEANSING

- Improvement of symptoms such as rheumatoid arthritis, cervical sprains, and lower back pain, etc.
- Effective for arteriosclerosis-induced cerebrovascular disease
- Relief from stiff shoulders, chronic fatigue, and sensitivity to cold
- Anti-allergic action
- Effective for coronary artery diseases such as angina pectoris and myocardial infarction
- Removal effect of hepatitis, HIV, influenza virus
- Improvement in peripheral circulation
- Effective for cancer, malignant lymphoma, and leukemia
- Improvement of symptoms of varicose veins

A safe treatment that is well-established and recognized overseas, and is also used in cancer treatments.

About blood ozone cleansing therapy

A 100ml blood sample is collected using a dedicated bottle. To stimulate blood metabolism and immune system functions, the most effective volume of ozone is measured and injected. Once the blood and ozone react, the dull black colored blood will immediately change to a brilliant red color. Lastly, the ozone-activated blood is transferred from the bottle back into the body. This alone can increase oxygen to the brain and eyes, and also bring relief to people who suffer from chills. Some people even begin to feel their body warming up during treatment. Blood ozone cleansing therapy (ozone treatment) is a method of treatment that can have significant benefits for symptoms and illnesses that do not improve with treatments covered by insurance. Blood ozone cleansing therapy (ozone treatment) is not well known in Japan but it is a well-established method of treatment throughout Europe, including UK, Germany, Switzerland, Italy, Austria, and Russia, etc. Blood cleansing is used for anti-aging and to treat blood clots, motor dysfunction in joints and muscles, etc., as well as in cancer treatment. Blood cleansing (ozone treatment) is a safe, standard method of treatment for which there are even hospitals specializing solely in this treatment method.

I see!
It's a standard
method of treatment
overseas!

Symptoms that can benefit from blood cleansing

- **Stiff shoulders, chronic fatigue, sensitivity to cold,**
Effect of improvement in blood circulation and cell repair
- **Removal effect of hepatitis, HIV, influenza virus**
Interferon is produced as a blood-ozone reaction
- **Improvement of symptoms such as chronic rheumatoid arthritis, cervical sprains, lower back pain**
Localized blood flow improvement to alleviate inflammation and pain
- **Effective on cancer, malignant lymphoma, leukemia**
Stimulates immune system functions
- **Arteriosclerosis-induced cerebrovascular disease**
Improve brain circulation
- **Coronary artery diseases such as angina pectoris and myocardial infarction**
Improve coronary blood flow
- **Improvement in peripheral circulation**
Improve diabetic peripheral neuropathy, symptoms of varicose veins
- **Anti-allergic action**
Atopic dermatitis, bronchial asthma, hay fever

Can have significant benefits for symptoms and illnesses that do not improve with treatments covered by insurance.

No risk of infection!

The bottles for blood collection and IV drip set used in blood ozone cleansing therapy are all ozone-resistant products imported from Germany. The syringe and collection bottle are single-use only disposable products. With each treatment, a new bottle is used for blood collection and ozonation, then blood is returned to the body. The collection environment is completely sealed so blood never comes in contact with someone. There is no worry about infection.

Side effects of blood ozone cleansing therapy

Up to 1999, treatments involved the use of polyvinyl chloride bags that reacted with the ozone and caused the production of toxic gases, resulting in some reports of side effects. However, there have been no reports of side effects since 2000 since switching to ozone-resistant routes and glass bottles.

Contraindication

Similar to hyperthyroidism caused by accelerated and uncontrolled basal metabolism and high concentration vitamin C infusions, G6PD deficiency is also contraindicated. As a safety precaution, blood ozone cleansing therapy is not offered for pregnant women.

Impressions of patients who have received blood ozone cleansing therapy

The following are the results of a survey of patients who received blood ozone cleansing therapy at clinics in Japan.

Especially effective for stiff shoulders and chronic pain. Also, as immunity improves, patients seem less likely to catch a cold. In this survey, blood ozone cleansing therapy was shown to alleviate symptoms for nearly all patients whose chief complaint was stiff shoulders. As for how much fatigue, including chronic fatigue syndrome, improves, although the degree of improvement is considerably high, some people do not improve with only occasional treatments once in a while. However, by repeating blood ozone cleansing therapy, the percentage of these patients who see improvements will increase.

In most patients, there is significant relief for stiff shoulders and chronic pain. Repeating blood ozone cleansing therapy increases the percentage of patients who see improvements.
